Feasibility Analysis

- Users will be (1) students, (2) instructors, and (3) admin.
- We, the developers, are familiar with the SIG (and NYUClasses).
- Reactjs, MongoDB, etc. : learn the way through
- Simple economic analysis:
 - Non-profit: nature of SIGs (no salaries from software side)
 - Maintenance (server) cost
 - Funded by NYU as a SIG

Risks

Risks	Category	Probability	Impact		Impact Values
Product may not be completed in time	PS	90%	1		1Catastrophic
Allocated tasks may not be synchronized in time	TE	80%	2		2Critical
End users resist system	BU	70%	2		3Marginal
Functionalities may not integrate well together	TE	50%	2		4Negligible
Product may not stand out in the market	BU	20%	4		
Development team may lack the appropriate knowledge and tools for implementation	DE	20%	3

Software Process Model - Spiral

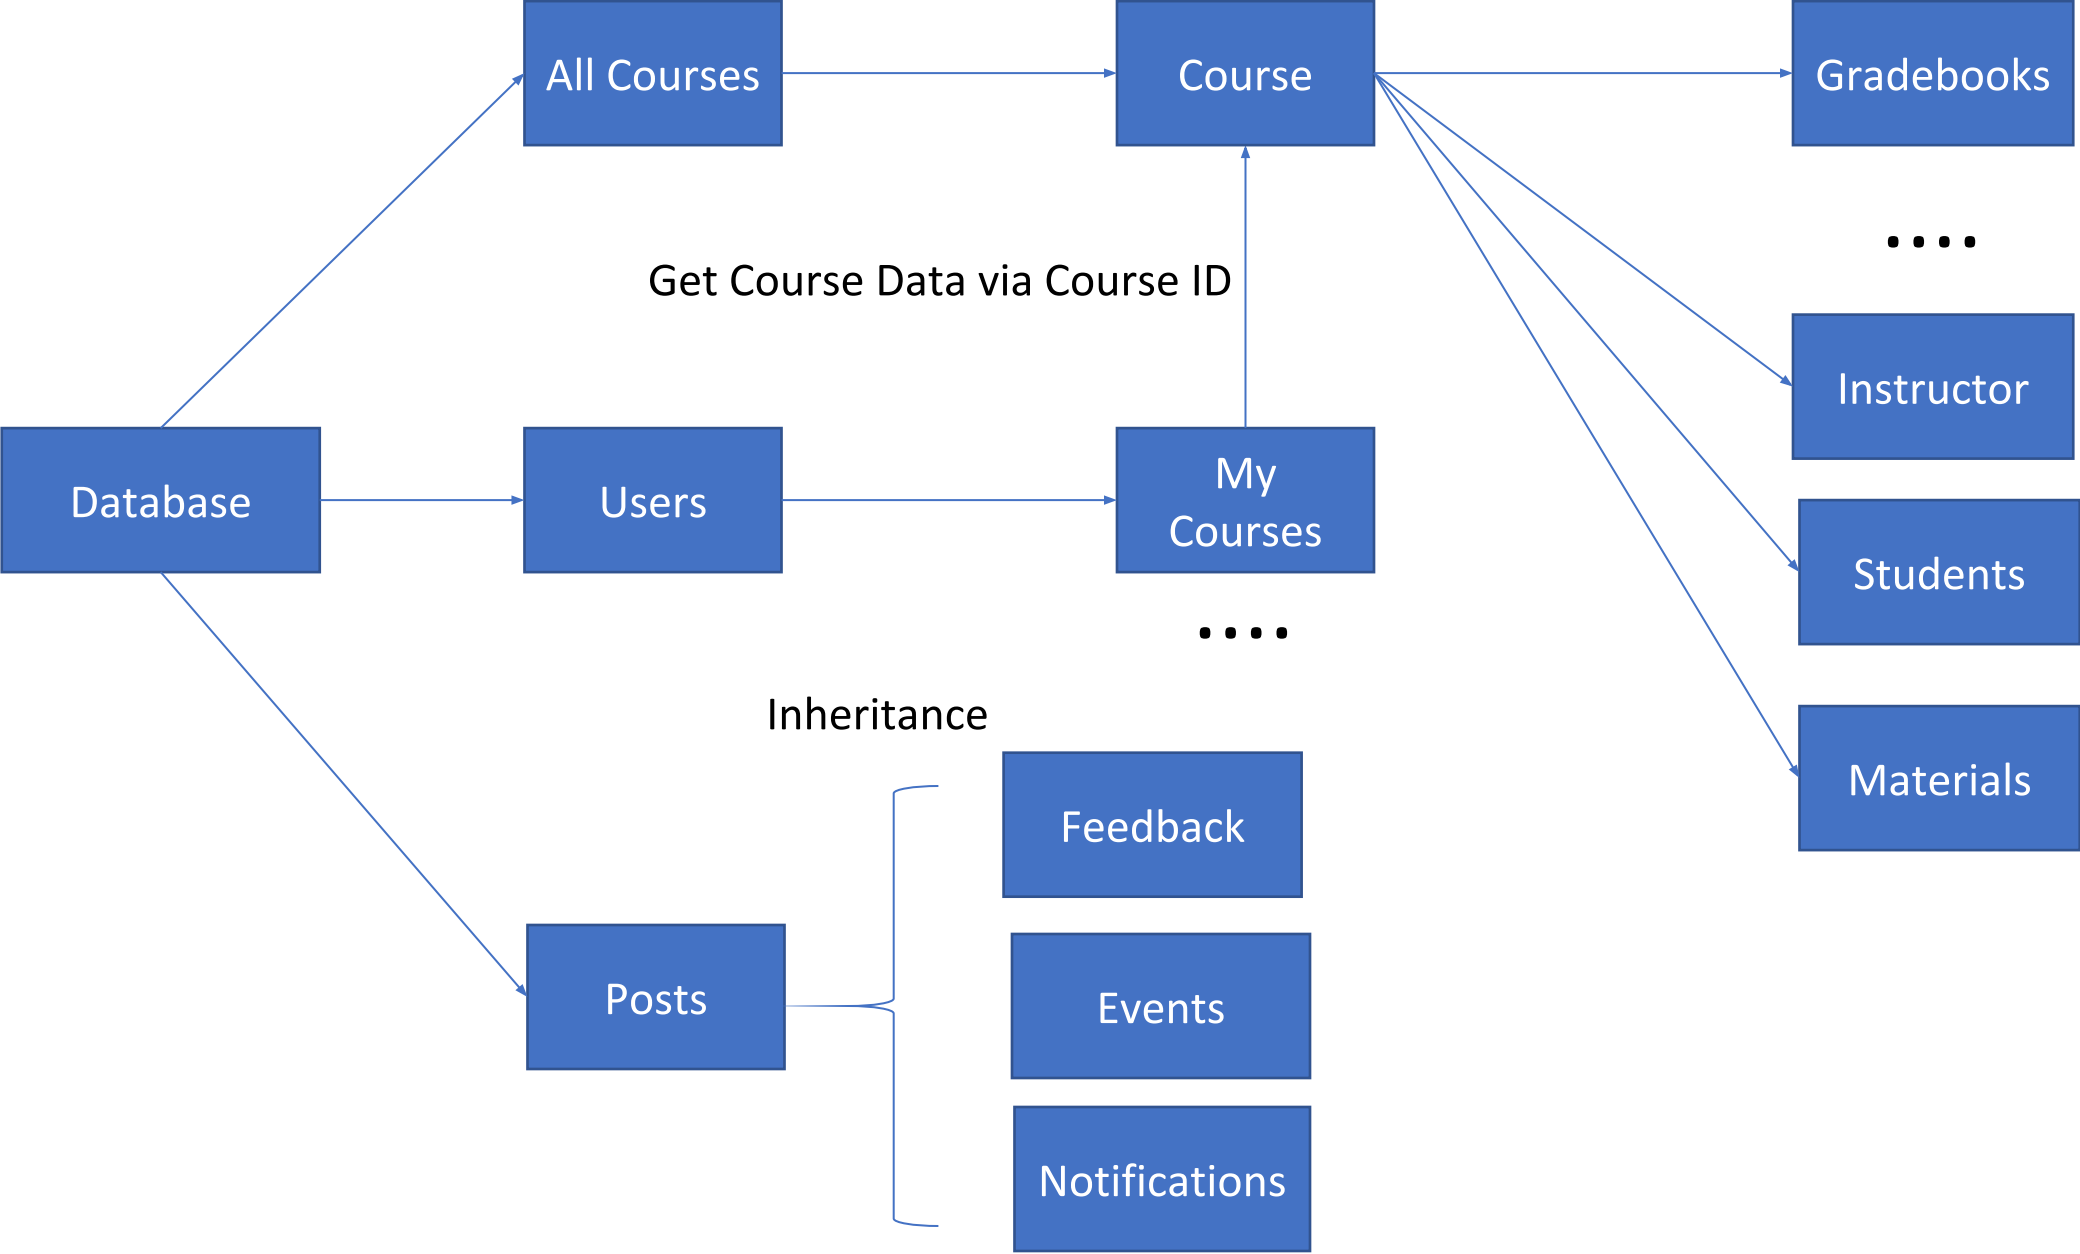

It demands a direct consideration of technical risks at all stages of the project.

Each pass through the planning region results in adjustments to the project plan. Cost and schedule are adjusted based on feedback derived from the customer.
